About

Innovative scientific methodologies and challenging projects marking future trends in the protection of cultural heritage, have initiated a universal conversation within a holistic approach, merging capabilities and know-how from the scientific fields of architecture, civil engineering, surveying engineering, materials science and engineering, information technology and archaeology, as well as heritage professionals and state holders in cultural heritage. The advanced digital documentation permits the data fusion of interdisciplinary innovative modelling, analytical and non-destructive techniques, supporting the emergence of a transdisciplinary field for multispectral sustainable preservation and management of cultural heritage. Within this field communication, social awareness and participation is enhanced.

The project of the rehabilitation of Holy Sepulchre's Holy Aedicule as a pilot multispectral, multidimensional, novel approach through transdisciplinarity and cooperation in the protection of monuments motivated the organization of this Conference. The know how transfer organized by the EDICULA Erasmus+ project finds its place within the Conference Panels.

The scope of the 2nd TMM_CH Conference is to present the latest developments in research and innovation that identify novel trends to build an interdisciplinary approach to conservation and holistic digital documentation of cultural heritage. The utilization and reuse of monuments, historic cities and sites, forms the framework of a sustainable preservation of cultural heritage, in accordance with the principles of circular economy; in terms of respect and protection of values, materials, structures, architecture and landscape; with an informed society, able to participate effectively in the policies that will design and implement the new strategies required. Sharing knowledge, experiences, and recommendations about sustainable cultural heritage approaches and practices at a moment of great risk and a time of renewed possibilities, will reorientate conversation to explore the current conditions and contours of the World in crisis recapturing itself through Culture, on the basis of reuse of heritage assets to generate revenue for a sustainable preservation towards circular economy, relaunching development.

The conference is English speaking and held at the Eugenides Foundation in Athens, Greece. It is organized in a hybrid format with preferable physical presence and feasible virtual attendance in case of onsite unavailability. The Eugenides Foundation complies with all the appropriate safety and protection measures against the spread of Covid-19, as defined by the Greek Health Authorities, and is a Covid-free space. Visitors must present their vaccine certificate or recovery certificate.

TMM-CH 2021 Proceedings

In numbers, 310 papers were submitted at the TMM-CH platform and, after peer review and revision, 124 were accepted, equivalent to a 40% rate of acceptance.

Special Book Series

The interdisciplinarity in the preservation of Cultural Heritage implies a holistic documentation with fusion of the various disciplines' data on 3D models and estimates via computer aided design either the preservation state and integrity of materials and structures, or the restoration of the authentic architecture. In parallel, new technologies are used to enhance and communicate the exploitation of cultural and natural assets, providing through tourism external economies to sustain local and regional development. Hence the "digital Heritage" papers, integrating all aspects as above will be published in:

- Springer Proceedings in Communications in Computer and Information Science CCIS - Transdisciplinary Multispectral Modeling and Cooperation for the Preservation of Cultural Heritage
- Springer Proceedings in Lecture Notes in Computer Science LNCS - Transdisciplinary Multispectral Modeling and Cooperation for the Preservation of Cultural Heritage - Communication and Information

More specific scientific papers, which are not relevant to the above framework, will be published in Special Book Series and Scientific Journals. More specifically:

- Springer Proceedings in Materials - Advanced Non Destructive and Structural Techniques for Diagnosis, Redesign and Health Monitoring for the Preservation of Cultural Heritage

Journals

- Developments in the Built Environment - Special Issue on Monitoring and Assessment for the Sustainable Preservation of the Built Environment
- Heritage - Special issue on Transdisciplinary Multispectral Modelling and Cooperation for the Preservation of Cultural Heritage
- Scientific Culture - Journal of Applied Science & Technology to Cultural Heritage Issues - Special Issue on Recapturing the World in Crisis through Culture
- Land - Special Issue on Preservation, Reuse and Reveal of Cultural Heritage through Sustainable Land Management, Rural and Urban Development
